

Stoner Pipeline Simulation Software

Stoner Pipeline Simulation Software

By combining our leading software products with our unrivalled experience in the oil.. Application and understanding of Stoner Pipeline Simulator (SPS)[J] NATURAL GAS INDUSTRY, 2013, 33(11): 104-109.

The analog computation does not comply with the hydraulic conditions It is not convenient to check the simulation results and the data output format is unalterable.. The software programming language is difficult to grasp The description of the compressor running performance is obscure.. Download: (1124 KB) (0 KB) Export: (RIS) Abstract The Stoner Pipeline Simulator (SPS) is a popular and excellent software in handling analog computation, hydraulic analysis, and operation and dispatching associated with gas pipelines.. About author:: Zheng Yunping, born in 1961, is a professor mainly engaged in teaching and research of oil and gas storage and transmission Service Articles by authors Cite this article: Zheng Yunping, Xiao Jie,Sun Xiao[]. Then, a qualitative analysis was made in this case in terms of modeling, validity check, debugging, operating condition, checking simulation results, data output, etc.. Chongqing? Oil & Gas Transmission Sub? company of CNPC Southwest Pipeline

Company, Chongqing 400020, China; 3.. SPS - Stoner Pipeline Simulator SPS easily handles any combination of scenarios including control system analysis, equipment performance analysis or pressure flow capacity analysis with user-defined levels of complexity.. The following findings were achieved The software operation is complex Non standard terms exist in the modeling.. In a case study of the Sinopec's Sichuan to more than the Gas Pipeline Project, SPS was adopted to simulate pressures, temperatures, flow rates and compressors' operation parameters in the working condition of the designed gas transmission volume of 12 billion m 3 per annum. real techniques brasil brush brush

It can simulate the single fluid, batch fluid or even single phase mixed fluids transported in the pipelines.. This study aims to explore the role of SPS in the pipeline operation and improve the operation management level.. On this basis, it is suggested that the software company should communicate well with the users and pull together to complete the software research and development, and that simulation software should be better independently developed and made in China..
